

Three paragraphs for the *Final Declaration*

Proposed for injection into regional working groups · operational base Sabios COP16 + TRÜA recommendations to CBD's OS8j.

DATA SOVEREIGNTY

DIRECT FINANCING

BIOCULTURAL GOVERNANCE

01

PARAGRAPH 01 · SOVEREIGNTY

Indigenous data sovereignty and *knowledge systems*

Indigenous data sovereignty is not a technical aspiration · it is an operational condition for peoples to safeguard the biocultural information of their territories under CARE principles (Collective benefit · Authority to control · Responsibility · Ethics). The Declaration of Sabios and Sabias COP16 (Centro Java Liviana · Muysca People · October 2024) states it clearly: *"our knowledge systems, given from creation and transmitted from generation to generation, are fundamental to protecting Mother Earth"*. In Colombia, the National Indigenous Organisation (ONIC) and the Territorial Monitoring System (SMT) are building the MACI Framework, articulating 5 operational modules around a Data Council · FPIC protocols · Nagoya ABS · biobank with Indigenous chain of custody · and bioeconomy with fair benefit-sharing. The evidence already exists: the Useful Plants × Resguardos Catalogue 2024 catalogues 5,690 geolocated species with Kew Gardens and GBIF endorsement · and custodian peoples steward close to **18 million hectares in NON-Amazonian ecosystems** (páramos · Chocó biogeographic · savannahs · drylands) in addition to Amazonian territories. The Brasília Declaration must recognise data sovereignty as a fundamental right complementary to the **CBD's OS8j**, and commit concrete mechanisms so national Indigenous organisations are recognised fiduciarly without intermediaries that dilute political control.

02

PARAGRAPH 02 · FINANCING

Direct financing *without intermediaries*

Less than **1%** of the USD 1.7 billion committed at Glasgow's Forest Tenure Pledge has reached national Indigenous organisations directly. This architecture is structural · two decades of climate funds channelled via international NGOs have produced fragmented capacity · short projects · and dependency. The Declaration of Sabios and Sabias COP16 states it literally: *"to agree on direct financing strategies with Indigenous Peoples · enabling execution and administration to be carried out directly by Indigenous governance structures for the implementation of Life Plans"*. The TRÜA World Summit to CBD's

OS8j reaffirms this. The Brasília Summit must move beyond declarations of intent toward concrete fiduciary mechanisms: **(a)** direct accreditations such as GCF DAE for national Indigenous organisations · **(b)** bilateral country packages with Indigenous title · **(c)** replicable national territorial funds (Podáali Brazil model) · and **(d)** philanthropic windows with minimum direct-Indigenous quotas. The commitment must be quantitative · traceable · with deadlines.

03

PARAGRAPH 03 · GOVERNANCE

Biocultural governance and *returning to origin*

Biocultural governance requires integrating three layers that today operate separately: traditional knowledge · formal science · and sustainable markets. The Declaration of Sabios and Sabias COP16 makes the underlying political-spiritual call: *"to return to origin to change the ambitious, violent, selfish and irresponsible ways of existing"* that devastate Mother Earth · and demands recognition of *"vital spaces, sacred sites and natural elements · waters, mountains, rivers, páramos, seas, savannahs, forests and jungles · as living beings, subjects of rights"*. The MACI Framework translates this mandate into operational architecture: community biocultural inventories with QA/QC and mandatory results-back · genetic capacities and biobank with specific FPIC and Nagoya ABS agreements · bio-business incubation with fair benefit-sharing clauses. Geographic coverage spans Colombia's 5 macro-regions with verifiable cases: **Matavén VCS+CCB certified · georeferenced Useful Plants Catalogue · U'wa SU-039/1997 ruling · Sierra Nevada's Línea Negra · Chocó Embera**. The Brasília Declaration must recognise Indigenous bioeconomy as legitimate own-economy · not market niche · and commit stable multi-year financial support to comprehensive programmes like MACI · not isolated 18-month projects.
