MACI • Operationalizing the *RRI Mandate* in Colombia

Four central themes · data sovereignty · biodiversity inventories with local AI · Indigenous-led biobank · and **ONIC as a LATAM methodological hub** accompanying sister peoples under the RRI coalition.

USD 60–80M / 5 YEARS

31.3% NATIONAL TERRITORY

102 PEOPLES · 5 MACRO-REGIONS

M3 + M4 · USD 45.94M

• 01 • WHY THIS BILATERAL

RRI • ONIC • an *operational alignment*

For 20+ years RRI has been the most solid global articulation around Indigenous territorial rights. Today ONIC proposes one step further: **operationalizing that mandate into replicable technical, financial and governance architecture**. MACI is the vehicle. This bilateral conversation shows two components that prefer image over word — plus a coalition proposal.

• 02 • HOW IT FITS RRI

Two RRI priorities • *two MACI answers*

RRI STRATEGIC · INDIGENOUS-LED FINANCE

MACI as bankable vehicle

5 operational modules · USD 12.79M year 1 · auditable by financial industry standards (Matavén Verra+CCB model running 10 years). Ready for **blended finance NICFI · FCLP · BID-Lab · GIZ** without intermediaries that dilute political control.

RRI STRATEGIC · SOUTH-SOUTH EXCHANGE

ONIC as LATAM methodological hub

Colombia has Latin America's **most advanced jurisprudence** on prior consultation (U'wa SU-039/1997 · 28 years of precedent). The CNMI sovereign-data protocol is already operating. ONIC offers methodological stewardship to sister peoples of the global south while they build their own capacities.

“

To return to origin — to change the ambitious, violent, selfish and irresponsible ways of existing. Enabling execution and administration directly by Indigenous governance structures.

DECLARATION OF SABIOS Y SABIAS COP16 · CENTRO JAVA LIVIANA · MUYSKA PEOPLE · OCTOBER 2024

Biodiversity *inventories* • ONIC sovereign app

The question technical donors ask most: "how will you generate credible data at territorial scale without sending everything to a Cambridge or Berkeley server?" Visual answer:

"Yatúa" • Sikuani • "Quina" • Spanish • Kew + GBIF

OFFLINE • 47 pendingWiFi sync

Field app • *online + offline*

▶ Local TFLite AI trained on 5,690 species from the Kew Useful Plants Catalogue • identifies without connection.

▶ SQLite AES-256 encrypted cache • works offline in deep forest • auto-syncs when WiFi appears.

▶ ONIC-owned servers (Sovereign Data Platform • Module 2) • zero external cloud • CARE+FAIR.

▶ Each record requires Cabildo approval before public sync (GBIF/iNaturalist). Indigenous custody by default.

▶ Native-language names registered as primary attribute • Kew taxonomy as secondary.

Flow: 📷 Camera → 🗨️ Local TFLite AI → 💾 SQLite offline → 📊 Sync detected → 🗄️ ONIC PSB (PostGIS) → ✅ Cabildo approval → 🇵🇪 SMT Dashboard

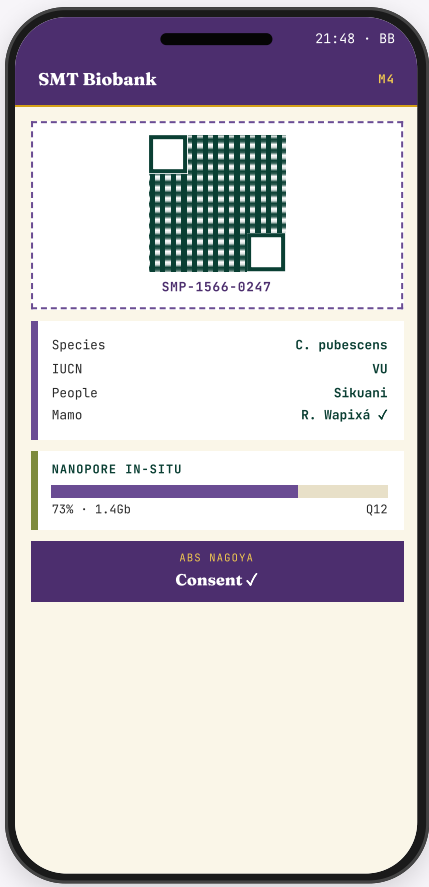

USD 38.47M • five years

YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5	TOTAL • M3
USD 7.09M OFFICIAL	USD 8.51M	USD 9.07M	USD 7.50M	USD 6.30M	38.47M

Year 1 = official figure (Phase 1 Formulation • April 2025) • Years 2–5 = reasonable projection with moderate growth for replication across 5 macro-regions then consolidation • classic scale-stabilize curve.

Indigenous biobank • *sovereign chain of custody*

Second frequent question: "will you send genetic samples to Nature Biotech or manage them yourselves?" Also a visual answer:

Sequencing *in-situ* • portable Nanopore

- ▶ MinION Mk1B (~USD 1,000 + ruggedized laptop) • in-situ sequencing — no export of samples.
- ▶ Indigenous chain of custody • 5 auditable steps (Collector → Promoter → Mamo → Curator → Biobank). Spiritual permit recorded on-chain.
- ▶ AES-256 encrypted FASTQ • ONIC custody • academic sharing under Nagoya ABS with digitally-signed consent.
- ▶ IUCN prioritization (CR • EN • VU) over the 5,690 species Plants Catalogue • 50 species in year-1 Matavén pilot.
- ▶ Replicable to Sierra Nevada • Cocuy • Línea Negra • Chocó (years 2—4).

Flow: 🌱 IUCN-prioritized plant → 🧬 MinION in-situ → 📡 AES-256 FASTQ → 📁 ONIC Biobank → 📄 ABS academic share with Mamo consent

USD 7.47M • five years

YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5	TOTAL • M4
USD 1.27M OFFICIAL	USD 1.65M	USD 1.85M	USD 1.50M	USD 1.20M	7.47M

RRI CO-FINANCEABLE WINDOW • M3 + M4 • 5 YEARS

USD 45.94M

Year 1 = official figures (Phase 1 Formulation • April 2025) • Years 2–5 = reasonable projection with sequential scale 1 → 3 → 5 macro-regions and final consolidation. Figures can be absorbed fully or partially by an RRI-aligned coalition of donors.

ONIC as *methodological steward* • RRI coalition

INSTITUTIONAL PROPOSAL • REPLICABLE SOUTH-SOUTH

"While other peoples *build their own capacities*, ONIC safeguards their data"

Sister peoples of the global south (Peru · Bolivia · Brazil · Ecuador · Central America · Africa) need technical capacities they do not yet have — and the RRI coalition can finance the methodological transfer. ONIC proposes to act as **temporary methodological steward**: hosts the data · trains the local organization · transfers everything once local capacities mature. Model based on the proven experience of **Colombia's CNMI sovereign GBV-data custody over 5 years**.

What we *offer* sister peoples

01 • DATA MANAGEMENT	02 • GIS DESIGN	03 • FIDUCIARY STEWARD
PostGIS + SQLite mobile architecture	GeoJSON + Leaflet + CARE/FAIR	Hosting + temporary custody chain
Replicable Sovereign Data Platform (MACI Module 2) stack · APIs · offline synchronization · encryption · technical training for local administrators of the sister-people.	Operational cartography for inventories · territorial layers · overlays with extractive concessions · all under validated CARE+FAIR protocols . Replicates the Useful Plants Catalogue model.	ONIC servers host the sister-people's data · custody chain with their government as final authority · full transfer when local capacities mature (typically year 3—5).

CNMI • SOVEREIGN GBV CUSTODY • 5 YEARS OPERATING

The replicable protocol we are *ALREADY* testing in Colombia

The National Commission of Indigenous Women (CNMI) safeguards GBV data with **absolute Indigenous sovereignty** · 30 indicators in 9 dimensions · 10 without precedent in state systems. Three key protocols transfer to the stewardship model:

- ◆ **Distributed cryptographic keys** across 7 territorial organizations · no central node can read everything.
- ◆ **Council of Women Guardians as ethical authority level N3—N4** · access-request decisions go through plural council.
- ◆ **Zero-access sovereignty** · neither national ONIC · nor State · nor academia have direct access · only the data-holding people.

01 CUSTODY	02 TRAINING	03 CO-MGMT	04 AUDIT	05 TRANSFER
ONIC hosts · agreement signed with sister-people	ONIC hands over protocols + trains local technicians	Sister-people administers · ONIC technical backup	RRI coalition validates full local sovereignty	Data to people's own servers · ONIC releases

THE ASK TO RRI • THREE CONCRETE THINGS

We ask the *RRI* coalition

01 Institutionally recognize ONIC as the LATAM methodological hub for biodiversity inventories + sovereign biobank · figure of the RRI Strategic Plan 2026—2030.

02 Co-finance MACI Modules 3+4 · USD 45.94M / 5 years as the demonstrative vehicle of the coalition. Aligned donors already identified: NICFI · FCLP · BID-Lab · GIZ · Campaign for Nature.

03 Facilitate methodological transfer to sister peoples (Peru · Bolivia · Brazil · Ecuador · Africa) under the CNMI-steward model. ONIC safeguards while local org matures RRI institutional backstop.

FOR SOLANCA STEWARD MODEL ONIC SAFEGUARDS WHILE LOCAL ORG MATURES RRI INSTITUTIONAL BACKSTOP
