Matawén Forest

The forest stewarded by five peoples · the fiduciary mechanism that already works.

A REDD+ project certified under two independent international standards (VCS + CCB), operated for a decade by a national Indigenous organization. Evidence · not proposal.

• CASE · THE STORY THE DATA TELLS

Five peoples · *one shared will* · a decade of operation

In the far northeast of the Colombian Amazon, where the Vichada River meets the marshlands and moriche palm groves, five Indigenous peoples — **Piaroa, Sikuani, Curripaco, Piapoco and Puinave** — autonomously administer one of the largest continuous forest blocks in the country. Not a national park. Not a government concession to third parties. It is an Indigenous resguardo managed by its own authorities through **ACATISEMA** (Association of Indigenous Councils and Traditional Authorities of the Matawén Forest).

In 2016, ACATISEMA registered the territory with the **Verra Carbon Standard** as a REDD+ project under identifier 1566. A year later, they simultaneously validated under the **Climate, Community & Biodiversity (CCB)** standard, a dual certification requiring not only deforestation reduction but also tangible social benefit and demonstrable biodiversity conservation.

What matters is not the certification itself — many REDD+ projects have been questioned. What matters is *who operates it*: the chain of custody, decisions over issued credits, signed community agreements (COMMS_AGR_1566_280CT2016) and verification reports for 2013–2015, 2016–2017 and 2018–2019 all flow through Indigenous governance. Without international intermediaries diluting political control.

OFFICIAL CARTOGRAPHY • VERRA ID 1566 POLYGON

Unified Indigenous Resguardo Matavén Forest • 1,150,212 net certified hectares • Vichada, Colombia • centroid 4.25°N • -68.87°W • Indigenous custody by ACATISEMA • 6 peoples (Sikuani • Piaroa • Puinave • Curripaco • Cubeo • Piapoco).

Certified REDD+ vintages • 2013 → ongoing

VINTAGE	VCUS ISSUED	STATUS	VERIFIER
2013–2015	2.224.201	Issued • registered	ICONTEC
2016–2017	4.503.224	Issued	ICONTEC + KBS
2018–2019	2.344.418	Issued + CCB 2022	ICONTEC + KBS
2020–2022	in certification	Draft MR VM0048 (2024)	KBS validation
TOTAL	9.071.843	3 periods • 6 verified years	dual auditor

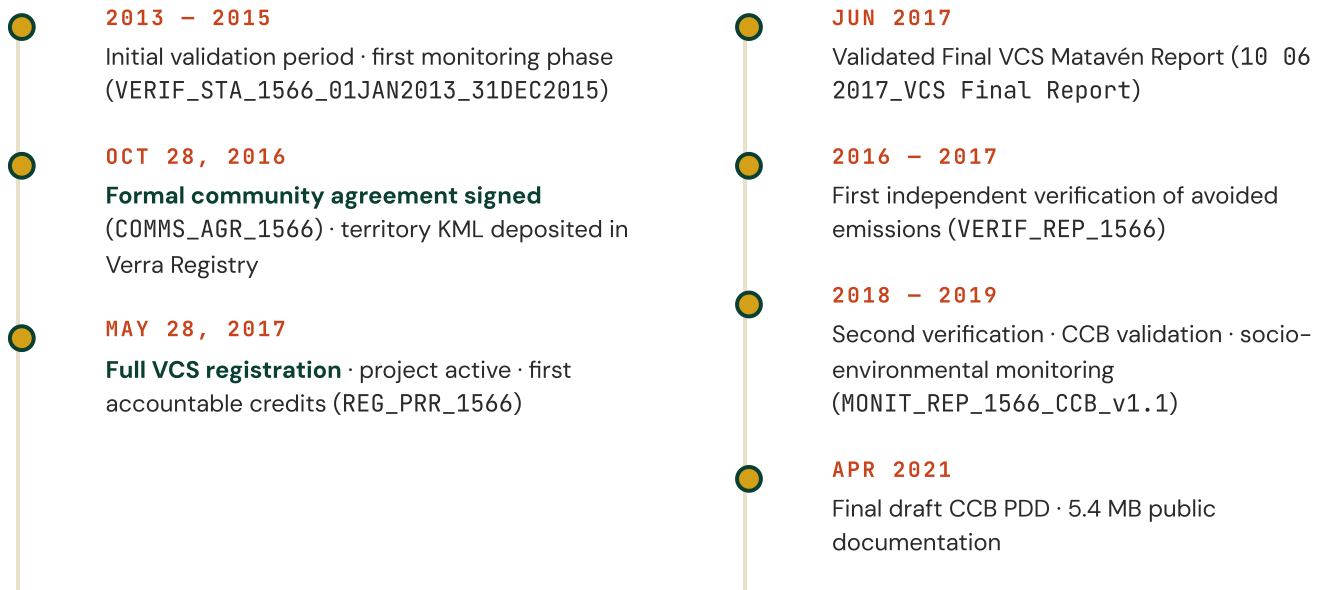

METHODOLOGICAL TRANSITION • VM0007 → VM0048

The 2020–2022 vintage is certified under VM0048, the consolidated framework that replaces VM0007 and incorporates a jurisdictional baseline allocation. This transition directly responds to the voluntary standard update following the comparative baseline analysis published in 2021. The 2023+ period continues under the same updated methodological framework.

Status as of May 28, 2026 • Draft Monitoring Report delivered to Verra in 2024 • KBS Certification Services validation in progress • issuance expected Q3–Q4 2026.

Three *concrete* things Matavén has already proven

• MACI FIT • SCALING 2026–2030

Operational base that MACI *proposes to scale*

Matavén is not an isolated case: it is the operational base MACI proposes to scale under national Indigenous governance. Specifically, it feeds three modules:
